

HapTech

Mini-Team Update

By: Landon Coonrod, Matthew Gardner, Peter Hilbert, & Karissa Smallwood

Mentor: Veerendernath Surendernath Komala

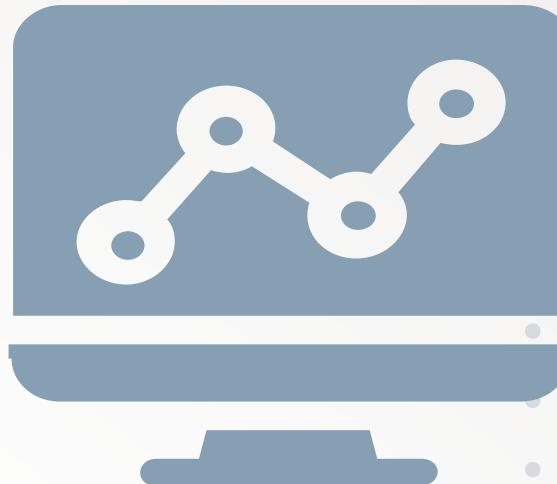

Project Overview

- **Project Focus:**
 - Data collection from the FRANKA robot
 - Integration of robot data into a 3D environment using CHAI3D
- **Client:**
 - Professor Reza from Northern Arizona University
 - Actively researching human-robot interaction within his lab
- **Team Experience:**
 - Faced multiple technical and integration challenges throughout the project

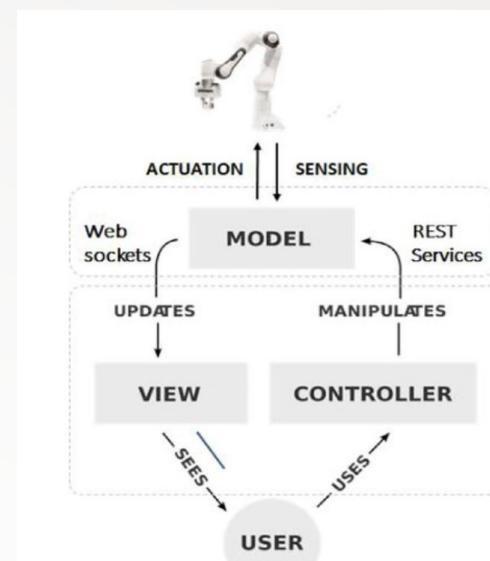

Progress & Recent Activities

- **Current Activities:**
 - Requirements Document
 - Setting up testing environment
- **Recent Activities:**
 - Technological Feasibility
 - Weekly client meetings
- **Key Design Decisions:**
 - Interface Approach
 - Data Management
 - System Communication
 - Hardware Integration
 - Testing Strategy

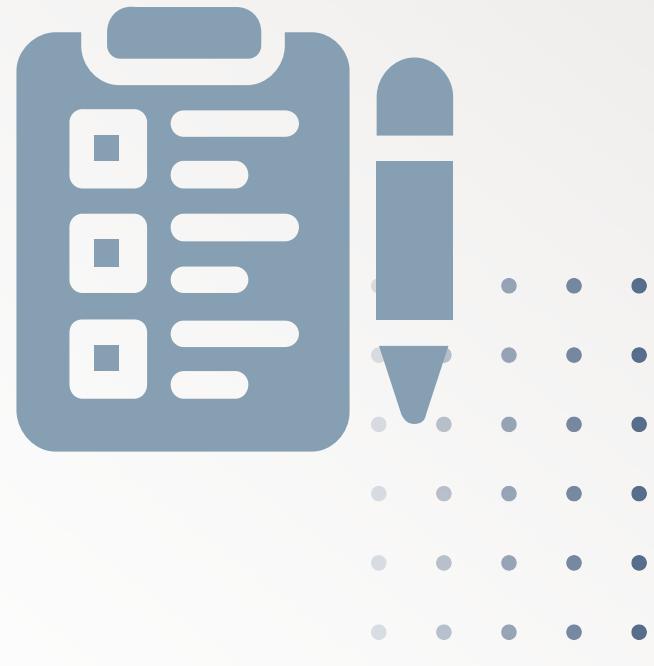

Technical Challenges & Solutions

- **User-friendly interface**
 - Terminal-based interface + GUI option
- **Data collection & storage**
 - CSV files for easy access and ease of analysis
- **UI-CHAI3D communication**
 - gRPC - high-performance, modular, service oriented networking library
- **Robot & CHAI3D Integration**
 - Interface with libfranka
- **Logistical Testing Limitations**
 - Virtual test devices in CHAI3D

Next Steps

- **Our next steps are:**
 - Develop and Test Chai3D prototype
 - Design and Create UI/Terminal interface
 - Integrate software with Franka 3 Robot
 - Conduct System Testing
- **Unresolved Challenges:**
 - Ensuring real-time responsiveness
 - Understanding how to integrate with Franka

Thank You!

That's our update! Any questions?
